

Key Holding and Mobile Patrols

Making Communities Safer

Trained far beyond Security Industry Authority requirements, our officers are experienced in a range of safety, security and incident management skills and are able to proactively work towards enhancing the safe environment you deserve, while also responding to incidents as required. Our officers are all trained in first response with approved first response and defibrillator kits in each vehicle.

At Ashridge Security Management we recognise both the fear and impact of issues such as crime, and anti-social behaviour on communities, both commercial and residential alike. Working closely with crime reduction and community safety initiatives, our patrol, response and key holding teams are a professional and visible aid in deterring anti-social and criminal activity, enhancing community safety and responding to client's alarm, CCTV or incident management systems as appropriate.

Staffed by teams and managers with extensive policing and emergency response experience, our proactive response model provides a visible safety network for industrial and commercial estates, residential communities and rural areas alike.

Our fleet of four-wheel drive vehicles are chosen specifically for their capability in winter weather and poor road conditions balanced with their green credentials using bio or hybrid fuel technology. Maximising our capability and minimising environmental impact. All of our security patrol vehicles are fitted with state of the art reliable technology including communications, tracking and CCTV equipment, to provide a transparent service open to scrutiny, for the protection and safety of our officers and the ability to monitor and record evidence.

- Targeted proactive high visible patrols.
- Remote security response.
- Lone worker escort.
- Incident management.
- Key Holding and Alarm Response.

We aim to create a safer more secure environment for our clients by providing high visibility patrolling backed up by an unparalleled ability to respond and manage incidents as required.
